Product Information

About Endura® 20% K

Endura® 20% K is a stabilised highly available liquid PK foliar product.

Endura® 20% K foliar applications increases the available Phosphorous and Potassium directly to the turf grass by bypassing any lock ups in the soil. Potassium regulates water movement and loss through the plant, influencing drought tolerance, cold hardiness, and helps in disease resistance.

Endura® 20% K also contains **Humic80®**, a concentrated Humic acid, for increased uptake of nutrients through the leaves and translocation within the plants.
