Product Information

About Fulmax®

Fulmax® is a concentrated liquid ORGANIC Fulvic acid extract designed to mobilise and naturally chelate macro and micro nutrients in the soil.

Fulmax® transforms fertilisers into easily available forms. **Fulmax®** mobilises Calcium, Phosphorous, Potassium, Magnesium and trace elements, increasing their availability when applied in a regular fertilisation program. Fulvic acid is known to increase the permeability of cell walls, to increase nutrient uptake.

Fulmax® is known to assist with leaching sodium out of the soil profile.

Fulmax® may also aid in the uptake of herbicides, pesticides and fungicides.

Directions & General Recommendations

Application Rates

Foliar Application:

Apply 3 - 5L / Ha per month with most fertilisers, pesticides, herbicides and fungicides.

Soil Application:

Apply 5 - 10L / Ha per month with any soil health program or sodium displacement program.

Product Handling

Fulmax® increases the solubility of many fertilisers in water.

Add **Fulmax®** to the water first at a rate of 1 - 2mL per litre of water, then dissolve other fertilisers into the water. This will increase solubility and reduce possible precipitation from occurring.

Compatibility

ALWAYS perform a compatibility test before mixing anything with **Fulmax®**.

Fulmax® can be used with fertilisers including calcium, biological materials, PGRs and non-selective herbicides.

CAUTION: Do NOT mix **Fulmax®** with copper or sulphur.

KEEP OUT OF REACH OF CHILDREN
